IZULA / IZULA-II® KNIFE & SHEATH SYSTEM

Where did the IZULA® name come from?

The locals in the jungles of the Amazon Basin call the meanest, nastiest ant of the forest by the name Isula. The Isula is known for its independence, aggressiveness, and its ability to survive. The IZULA® knife is built the same way. The IZULA® is designed to be the perfect lightweight survival kit or low-profile carry knife.

If you ordered the complete IZULA® Kit, your package includes: IZULA® Knife, Molded Sheath, ParaCord, Split Rings, Ferro Fire Starting Rod, Emergency Whistle, Snap Hook, Clip Plate & Hardware.

If you ordered the IZULA® (without kit), the kit includes the IZULA® knife and molded sheath only. The standard IZULA® does not include Micarta handle scales (optional purchase through our dealer network). The IZULA-II® ships with full handle scales.

IZULA-II

Note: Our knives are made from high carbon 1095 steel. And while 1095 is a top choice for professional cutlery designed for hard use, it will rust and stain if not properly cared for - especially on the cutting edge and around the laser engraving. It is the user's responsibility to keep the blades properly lubricated and cleaned. We suggest using a dry film rust inhibitor.

NOTE: The Izula edge is sharpened by hand to approximately 20 degrees.
